(a) SANDY LOAM -- UNDER BARE GROUND SURFACE. (b) RAMONA SANDY LOAM -- BARE GROUND, EXPOSED TO THE SUN. (c) RAMONA SANDY LOAM -- UNDER THE EAST SKIRT OF A VALENCIA ORANGE TREE, SHADED AND UNDER REGULARLY IRRIGATED SOIL. (d) SALINAS SILTY CLAY LOAM, BARE GROUND EXPOSED TO SUN. (e) SANDY LOAM -- UNDER GRASS. MAXIMUM AND MINIMUM FROM CONTINUOUS RECORD. ø THE MONTHLY AVERAGE HAS BEEN OBTAINED BY USING THE MEAN OF THE WEEKLY AVERAGES.

MONTHLY EXTREMES

Highest Temperature 85° on the 19th at 2 stations.

Lowest Temperature -16° on the 2d at White Mountain No.1.

Greatest Total Precipitation 22.26 inches at Cisco Ranger Station.

Least Total Precipitation 0.18 inch at Coyote Wells.

Greatest One-day Precipitation 5.60 inches on the 21st at Vollmers.

Greatest Total Snowfall 149.0 inches at Soda Springs.

Deepest Snow on Ground 144 inches on the 30th at Twin Lakes.

See reference notes following Station Index.

† 8:00 A.M.

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

APRIL 1958
Volume LXII No. 4

ASHEVILLE: 1958

The month was marked by unusually heavy precipitation, near record snowfalls in the mountains, and severe storm conditions over California which continued from March through the first seven days of April. Although the remainder of the month was generally sunny and dry, April precipitation totals were still much above normal over all but the extreme northeastern and northwestern portions of the State, many stations in central California and along the south coast receiving more than four times normal April totals. Seasonal precipitation through April was about twice normal in most areas with many record or near-record totals, some of the highest being 132.10 inches at Stouts Meadow storage gage, 125.42 at Cazadero, and 122.72 at Vollmers. Charts of the precipitation anomalies for both April and the season are shown in the California Department of Water Resources "Water Conditions in California as of May 1, 1958."

STORM DATA AND UNUSUAL WEATHER PHENOMENA: A series of storms developing off the coast of Washington and Oregon with associated fronts moving rapidly southeastward across California, caused almost continuous moderate to heavy precipitation over most of the State during the period March 29 to April 7. The portion of these storms and damage occurring in March was included in the March 1958 Climatological Data. Unusually strong cold fronts on the 1st, 2d, 3d, and 7th caused widespread thunderstorms, hail, and strong, gusty winds over the State. Small tornadoes occurred at San Francisco International Airport and near Turlock on the 1st, and a waterspout was observed at Laguna Beach. A small tornado was observed at Fresno on the 3d. Funnel clouds were observed near Travis Air Force Base and Merced on the 3d, at Fresno on the 4th, and near Coalinga and near Oceanside on the 7th. Other freak winds, described in news reports as "twisters" but not substantiated by eye-witnesses, caused considerable damage to buildings and trees on the 1st at Carlsbad and Loma Alta Canyon in San Diego County, Fullerton, Aliso Beach, and Huntington Beach, and on the 6th at Redondo Beach and Torrance. A freak wind storm on the 1st uprooted 42 almond trees and ripped off a garage roof at a ranch near Le Grand. Elsewhere, strong, gusty winds damaged trees, powerlines, and buildings in scattered areas throughout California. Heavy snow fell in the Sierra, occasionally as low as 1,500 feet, and snow and slides stopped all transportation through the mountains for several days. The snow was reported 12 feet deep on the ridge above Big Bear Lake Dam on the 5th. The 106 inches at Blue Canyon on the 4th and 6th was exceeded only by the 110 inches in April 1952. At Soda Springs the weather station was completely buried by the heavy snowfall, but at Norden 10 feet of snow were reported falling in 5 days with 270 inches of snow on the ground the 4th. A snowslide near Norden derailed a mail train, injuring two trainmen, and marooning 25 passengers. Rainfall of near record intensity occurred with the frontal passage in the central coastal area on the 2d. At San Francisco 0.96 inch rain fell in 60 minutes, the third greatest one-hour intensity of record, flooding downtown streets, basements of business establishments, and numerous other places in the Bay area. Hardest hit areas were the San Francisco Peninsula to Morgan Hill, southern Alameda County, the Pleasant Hill and Rodeo areas of Contra Costa County, and the Carmel River area, Monterey County. The entire State was designated a disaster area by the President on April 5th. Rain swollen creeks and rivers overflowed throughout central and southern California, many smaller streams in central California reac ing peaks exceeding those attained in the December 19 floods. Several thousand acres of farmland were flood in the San Joaquin Valley from the overflowing of t Tule, Chowchilla, Fresno, Merced, and San Joaquin River Panoche, Los Gatos, and other minor creeks. Except f minor flooding at Roseville, no additional floods o curred in the Sacramento Valley, but there was consider ble overflow into the bypass system of the Sacramen River and dangerously high tidal stages in the delt The Russian River crested 4 feet above flood stage Guerneville on the 3d, a record spring stage, but on minor flooding resulted. In southern California stree were flooded in low places in many areas; overflowing w reported on the Santa Maria River, Carbon Canyon Cree and the Mojave River. Lower sections of the Mojave Rive normally dry, had surface water for the first time sin 1943. Locally heavy hail occurred in many places resul ing in considerable crop damage, particularly in almo orchards. Lightning struck powerlines, transformers, a buildings in several localities, and an airliner ne Santa Barbara causing minor damage. No injuries to t 33 persons aboard were reported. Persistent strong win offshore raised mountainous seas which pounded the coa from Crescent City to Monterey, causing an estimat $143,000 damage to harbor installations and beach facil ties. At Morro Bay, three fishing boats were torn fr their moorings and sunk. Wind blown waves with an a normally high water level at Clear Lake again damag homes and business establishments near the shore. The were numerous landslides in hilly and mountainous area and several more homes were damaged or destroyed in ce tral and southern California. Damages to roads and bridg from slides and floods were enormous. Preliminary e timates of total storm damage to California State a Federal highways were placed near $12,000,000 for t three-month period February-April, the greatest sing items being the Palisades slide ($1,250,000) and s wall at Oceanside ($1,000,000). Cumulative damages fr winter and spring storms to county roads in 35 nort ern and central California counties was estimated ov $10,000,000. A preliminary American Red Cross repo listed 20 homes destroyed by floods or slides in northe and central California during April storms, 2,332 hom damaged, and damages to 419 other buildings. Damage buildings, roads, and bridges from flooding alone southern California was estimated at $165,000. Th persons drowned in central California: a man in Co Madera Creek, Marin County; another when his canoe w upset by wind on Anderson Reservoir, Santa Clara Coun and a woman, apparently in the San Lorenzo River. persons were injured by the storm; one in Walnut Cre one at Rockaway Beach, two at Norden, one in Los Angel and one in Carlsbad. Six persons were killed and seve were injured in storm-contributed traffic accidents.

The effect of weather on crops can be found in California Weekly Weather and Crop Bulletin (especia the April 8, 1958 bulletin) prepared jointly by the Ca fornia Crop and Livestock Reporting Service in Sacrame and the U. S. Weather Bureau State Climatologist, Francisco.

****

MONTHLY EXTREMES

Highest Temperature 109° on the 22d+ at Indio U.S. Date Garden.

Lowest Temperature -10° on the 5th at White Mountain No. 1.

Greatest Total Precipitation 13.55 inches at Lytle Creek Ranger Station.

Least Total Precipitation 0.10 inch at Coyote Wells.

Greatest One-day Precipitation 5.97 inches on the 1st at Crystal Lake East Pine Flat FC 283 B.

Greatest Total Snowfall 91.0 inches at 2 stations.

Deepest Snow on Ground 190 inches on the 4th+ at 2 stations.

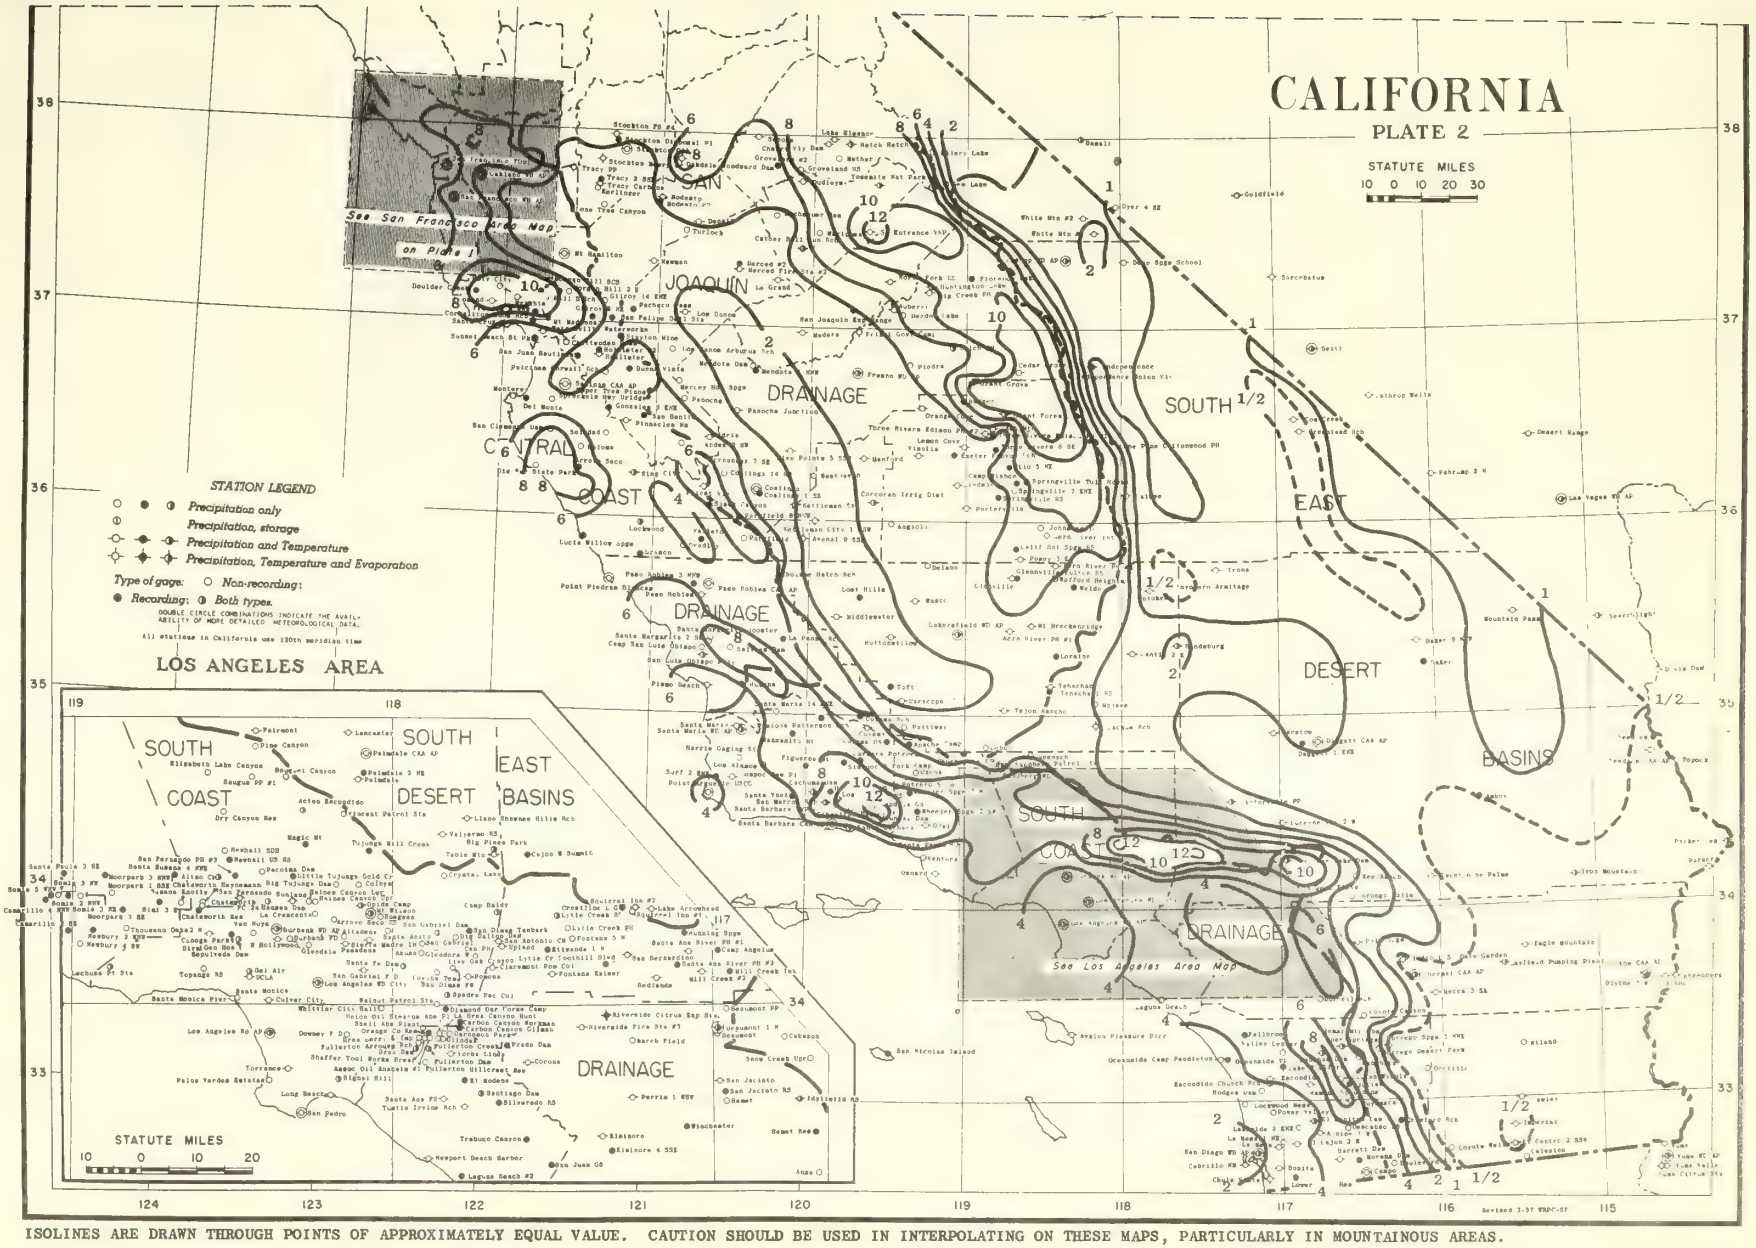
STATION LEGEND
Precipitation only
Precipitation, storage not shown on this map
Precipitation and Temperature
Precipitation, Temperature and Evaporation
Type of gage: Non-recording:
Recording: Both types.
Double circle combinations: Complete Meteorological.
DOUBLE CIRCLE COMBINATIONS INDICATE THE AVAILABILITY OF MORE DETAILED METEOROLOGICAL DATA.
All stations in California use 120th meridian time.



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

THIS ISSUE CONTAINS ADDITIONAL DATA FOR THE STORM OF APRIL 1 THROUGH 7 ON PAGE 112.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

MAY 1958
Volume LXII No. 5

ASHEVILLE: 1958

May 1958 was one of the warmest of record in California, although periods of below normal temperatures in the mountains kept the snowmelt -- from record or near record May snow depths -- from reaching peaks as high as expected. Nevertheless U. S. Geological Survey reports showed runoff a record high for May at the key stations Trinity River at Lewiston and West Walker River near Coleville. The California Department of Water Resources placed the June 1 effective snow line about 7,000 feet on the American River watershed and about 9,000 feet on the Kings River watershed. Although precipitation for the month was generally near normal there were a number of noteworthy local heavy showers and thunderstorms resulting from low pressure persisting off the California coast most of the latter two decades.

STORM DATA AND UNUSUAL PHENOMENA

On the 10th and 11th widespread thunderstorms occurred over most mountain areas in California and the San Joaquin Valley. At Bonita 0.49 inch rain fell in about 20 minutes on the 11th, and there were reports -- which could not be verified -- of a small tornado north of Coalinga in the Oil Fields section on the 10th.

On the 22d and 23d the storm off the California coast intensified causing widespread thunderstorm and shower activity north of Santa Barbara and Bakersfield. In the San Francisco Bay area there were locally heavy showers, generally between 6:00 p.m. and 7:00 p.m. the 22d with 0.31 inch rain falling in 5 minutes at San Francisco for the second greatest 5-minute amount of record since 1906. This intense rain overtaxed storm drains, popped manhole covers flooded streets, stalled cars, and caused some minor flooding of homes and stores. At Vallejo a 10-minute cloudburst, preceded by sharp thunder and lightning, flooded streets in the Carter-Frisbie Street area, and caused minor flooding of several homes. At Lookout, Modoc County, a violent hailstorm occurred from 5:52 p.m. to 6:00 p.m. on the 22d. In less than 10 minutes 0.57 inch of precipitation fell as measured in an open top homemade gage. Hailstones, measured up to one inch in diameter and reported up to one and one quarter inch one mile east, bounced out of the standard gage and dented the funnel. Roofs of buildings were damaged, windows were broken, and crops damaged. A small tornado with funnel alternately lifting from and descending to the ground from dark clouds was observed in the Panhandle area south of Tulelake (Sec. 28, T. 46 N., R. 5 E.) about 6:00 p.m. the 22d. The tornado demolished a machine shed on one ranch and caused structural damage on two other ranches, damage estimated to $7,100 over a path three miles long and fifty yards wide.

The effect of weather on crops can be found in the California Weekly Weather and Crop Bulletin prepared jointly by the California Crop and Livestock Reporting Service in Sacramento and the U. S. Weather Bureau State Climatologist, San Francisco.

Robert F. Dale
State Climatologist
U. S. Weather Bureau

MONTHLY EXTREMES

Highest Temperature 113° on the 29th at Indio U S Date Garden.

Lowest Temperature 6° on the 13th at White Mountain 1.

Greatest Total Precipitation 2.94 inches at Volta Power House.

Least Total Precipitation 0.00 at 35 stations.

Greatest One-day Precipitation 2.02 inches on the 12th at Paynes Creek.

Greatest Total Snowfall 11.5 inches at White Mountain 1.

Deepest Snow on Ground 112 inches on the 1st at Twin Lakes.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

JUNE 1958
Volume LXII No. 6

ASHEVILLE: 1958

June 1958 brought to a close one of the wettest seasons of record in northern and central California. The greatest seasonal anomalies (July 1957 - June 1958) occurred in the lower San Joaquin and Sacramento Valleys where seasonal totals were about double the normal amounts. In the San Joaquin Valley it was the wettest season at many long-record stations -- Stockton dating back to 1867, Newman to 1889, and Fresno to 1878. In the upper San Joaquin and upper Sacramento Valleys it was generally the second wettest season of record and the greatest since the record 1940-1941 season. Although there were several seasons with more rain at Sacramento the amount received in the first six months of 1958 was the greatest since records began in 1849. In the central coastal area it was generally the wettest season since 1889-90.

Thunderstorms were unusually frequent in northern California during June, thunderstorms having been observed on eight days at Blue Canyon for the greatest number recorded in any previous month. At Red Bluff thunderstorms occurred on five days with distant lightning on five others as compared to an annual average of five days with thunderstorms. It was unusually warm along the entire coast -- the third warmest June of record at Los Angeles and Eureka, and the second at San Francisco.

STORM DATA - A Low developing aloft and moving eastward across central California on the 10th and 11th set off numerous and locally severe thunderstorms in northern California. On the 10th heavy hail was observed at Cordes about 17 miles southeast of Lakeport, and hail was reported accumulating like snow on Cobb Mountain; 1-1/2 inches of rain fell in a sudden downpour at Rutherford, Napa County, turning streets into rivers,and 1.15 inches fell in 40 minutes at Oakville 1 WNW about 2 p.m. as lightning disrupted power service. The morning of the 11th, 3 to 4 inches of hail accumulated on Highway 50 between Pollock Pines and Strawberry. On the 12th lightning caused many power outages in Yuba and Sutter Counties, and the accompanying 1.10 inches which fell at Marysville in a few hours near noon was the heaviest June 24-hour rainfall since records began in 1871. Precipitation was sufficiently heavy between the North Fork of the American River and the North Fork of the Feather to produce runoff into these streams, unusual for June. Hail fell at St. Marys College, and there was lightning damage to powerlines on Hatchet Mountain.

Another upper Low over northern California caused scattered thunderstorms on the 17th - 19th which were unusually severe in the Fort Bragg coastal area where power systems, six private homes, and the Union Lumber Company powerhouse were struck by lightning between 7 p.m. and 9 p.m. on the 18th. This storm caused several thousand dollars damage and was described by the older residents of Fort Bragg as the most severe of memory. At Upper Lake Ranger Station lightning strikes started 5 fires on the 18th and 8 on the 19th. In the Klamath National Forest, Siskiyou County, there were 24 lightning strike fires, and communication and power services were interrupted. Mothball-size hail fell at Squaw Valley.

Locally severe thunderstorms again occurred in the northern mountains on the 22d and 23d. At Mt. Shasta 14 transformers were damaged by lightning early on the 23d, and 2 to 3 inches of hail were reported in the Warner Mountains, Modoc County.

The effect of weather on crops in California can be found in the California Weekly Weather and Crop Bulletin prepared jointly by the California Crop and Livestock Reporting Service in Sacramento and the U. S. Weather Bureau State Climatologist, San Francisco.

Robert F. Dale
State Climatologist
U. S. Weather Bureau
San Francisco, California

****

MONTHLY EXTREMES

Highest Temperature 121° on the 27th at Cow Creek and the 28th at Greenland Ranch.

Lowest Temperature 13° on the 3d at White Mountain 2.

Greatest Total Precipitation 6.54 inches at Pit River Power House 5.

Least Total Precipitation 0.00 at 176 stations.

Greatest One-day Precipitation 4.04 inches on the 2d at Shasta Dam.

Greatest Total Snowfall 5.0 inches at White Mountain 2.

Deepest Snow on Ground 30 inches on the 1st at Twin Lakes.

MAXIMUM AND MINIMUM IN ABOVE TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.

****

DELAYED NARRATIVE WEATHER DATA

OCTOBER 1956 - Add the following after the first sentence in the second paragraph of "Severe Storms", page 286:

Two tornadoes were reported about 10 to 15 miles south of Merced about 2:00 p.m. the 23d. The tornado extended sinuously from cloud to ground when first observed and dissipated in about 5 minutes. Another funnel formed nearby at the bottom of the cloud and extended to the ground in about two minutes. The second tornado was larger in diameter than the first and was estimated several hundred yards wide at the ground. A rain squall prevented observation of its dissipation.

DECEMBER 1957 - Add the following after the last paragraph titled "Storms", on page 374:

On the 26th: Severe local windstorm at 5:20 p.m. caused extensive roof damage to three homes in the Country Modern Homes development about a mile west of Mojave. The storm was reported locally as a "Twister" but was unconfirmed and on official meteorological reports considered as strong gusty post frontal winds intensified by venturi effect of Oak Creek Canyon about 8 miles northwest. Wind speeds at Edwards Air Force Base, about 20 miles east-southeast of Mojave, reached a peak gust of 41 m.p.h. at 4:15 p.m.

MARCH 1958 - Add the following between the 10th and 11th paragraphs on page 68:

A funnel cloud was observed between Winters and Vacaville at 3:45 p.m. on the 27th. The funnel extended downward from the base of a heavy dark squall-like cloud with a narrow streak resembling a plastic hose extending below the dark funnel. The cloud was observed from a location 15 - 20 miles north. The funnel did not reach the ground during observation, and there were no reported damages.

MAY 1958 - Add the following after the last sentence in the second paragraph of "Storm Data and Unusual Phenomena", page 136:

The tornado advanced from southeast to northwest except for momentarily turning toward the southwest before demolishing the machine shed on the Marion Palmer Ranch.

CORRECTED DATA

JULY 1912	MECCA	Temperature mean min should be 74 0 and monthly mean 88.4
AUGUST 1950	DAVIS	Min temperature on 2d should be 59, 3d, 53, 4th, 54; 5th, 47; mean min 55 0, mean 75 7, departure,+0 8, and lowest min,47 on 5th.
JULY 1956 through OCTOBER 1957	LA MESA 1 NE	Published record to be used with caution Data was obtained from an unofficial rain gage
MARCH 1957 and ANNUAL 1957	LOS BANOS	Average min should be 68.7, average,56.3; departure,+1.3; and annual average, 62 1; and departure,-0 7
MAY 1957 through FEBRUARY 1958	BEAUMONT 1 S	Record published for the period indicated should have been published in the Southeast Desert Basin
OCTOBER 1957	SOMIS 3 NE	Precipitation on 21st should be 1 13, 31st, 0 00, and monthly total 2.23.
NOVEMBER 1957	OXNARD	Precipitation on 3d should be 0 24, monthly total,0.28; departure,-0.82; greatest day,0 24 on 3d; and days with 10 or more,1
DECEMBER 1957	OXNARD	Precipitation on 6th should be 0 78, monthly total,4.21; departure,+1.07; and days with 10 or more,5; 50 or more,5
JANUARY 1958	BIG BAR RS	Delete all min temperatures and appropriate derived data
	HOOPA	Precipitation on the 24th should be 0 06 and monthly total 14.29.
	RICHMOND FIELD STA	Wind movement on 31st should be 345 and monthly total 1592
FEBRUARY 1958	BLYTHE CAA AP	Precipitation on 20th should be 0.54, monthly total,1.35; departure,+1.16; and greatest day,0.74 on 4th
	LECHUZA PATROL STA FC 352	Precipitation on 2d should be 0 51, 3d, 1 67, 4th, 1.30; 5th, 0.05; and monthly total,10.24
	LOS BANOS	Min temperature on 5th should be 46; mean min,44.8; and total degree days,290.
MARCH 1958	BARNESON PARK	Precipitation on 31st should be 0.00 and monthly total 5.34.
	CRYSTAL LAKE FC 283 B	See delayed data for corrected daily precipitation. Monthly total should be 12.48
	OXNARD	Precipitation on 28th should be 0 20, 30th, 0.00; 31st, 0.17; monthly total, 6.49, departure,+4 23, and days with 10 or more,10
	PLYMOUTH	Precipitation on 28th should be 0 00, 29th, 0 13; 30th,1.70; 31st, 0.20; and monthly total,9.44
	REDDING FIRE STA 2	Precipitation on 13th should be 0.48, monthly total,6.87; departure,+1 91; and days with 10 or more,11
APRIL 1958	BOWMAN DAM	Precipitation on 1st should be D1.70; monthly total.D6 77; and monthly snowfall total,64.0.
	GREENVILLE RS	Precipitation on 18th should be 0.00 and add 'Trace' on 5th, 6th, 17th, and 29th. Monthly total should be 6.34.
	HAPPY CAMP RS	Max on 30th should be 83 and min 38. Mean max should be 68.0, mean min,37 1; mean,52.6; departure,-1.7; highest max,83 on 30th,and degree days total,364
MAY 1958	JOICE ISLAND	Precipitation on 23d should be 0.63; monthly total,0.73; greatest day,0.63 on 23d, and days with .10 or more,2; 50 or more,1. Evaporation from the 13th through 23d should be an accumulated (*) 1.37 and monthly total 6.42

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

JULY 1958
Volume LXII No. 7

ASHEVILLE: 1958

July 1958 was the wettest of record at many stations in interior northern and central California -- dating back to 1867 at Fort Bidwell and 1888 at Mount Shasta -- and was also marked by unusually intense thunderstorm activity. Thunderstorms were recorded on ten days during the month at Mount Shasta, the greatest number on record there in July.

STORM DATA: The first intense thunderstorm of the month was reported at Susanville about 7:00 p.m. on the 19th accompanied by gale winds, torrential rain, and hailstones up to one inch in diameter. There was extensive hail damage to roofs and vegetation on the south side of town, and many basements were flooded.

Widespread thunderstorms with locally strong winds, torrential rains, and heavy hail occurred over most of northern California north of a line Ukiah to Oroville on the 23d and 24th. Lightning struck telephone and powerlines in several localities and damaged three homes at Capay, Ukiah, and Mill Creek, and caused 82 forest fires in northern California mountains. Gale force winds damaged farm buildings north of Orland. Cloudbursts with hailstones ranging up to golf ball size hit the Scott and Shasta Valleys (Fort Jones and Gazelle areas) of Siskiyou County, destroying up to 75 percent of the grain crops in some areas and washing out railroad beds and flooding some highways. Unofficial reports of rainfall in the Gazelle area of the Shasta Valley were as high as four inches in a 3-hour period. A sawmill was washed away by flood waters. Damage in the area was estimated at $50,000 for property and $116,000 for crops. In Modoc County hailstones up to an inch and a half in diameter fell near Patterson Ranger Station. In the south end of Jess Valley there was extensive damage to the hay crop from hailstones ranging up to two inches in diameter and which covered the ground to a depth of three to four inches and severely damaged at least one aluminum barn roof. Heavy rain and hail caused considerable damage in the Fort Bidwell area. A severe hailstorm occurred in the vicinity of Portola, and at Susanville approximately one inch of rain fell in 15 minutes with hailstones measuring about a half inch in diameter.

Widespread thunderstorms again occurred in northern and central California and also in the interior of southern California on the 28th and 29th. Lightnin in these storms caused six deaths and two seriou injuries. Three boys who had taken refuge under large tree near Vacaville were killed when the tre was struck by lightning. Another boy was killed b lightning while wading in Bass Lake near Placerville A man was killed by lightning while operating a bull dozer near Cool, Eldorado County. Near Woodland, ranch worker was killed while irrigating a tomato fiel when struck by lightning. Two orchard workers wer seriously injured by lightning in a peach orchard i northern Merced County. Lightning struck trees, houses powerlines, and started numerous grass, brush, an forest fires throughout central and interior souther California. Cloudbursts flooded many highways and lo lying areas in the southeastern desert, with many store and homes inundated in the central section of Twenty nine Palms. Cotton fields in the northern section of the Imperial Valley were hard hit by wind, heav rain, and flooding. Heavy rains in the mountains o southern California caused several mud slides, on covering the highway for a half mile in the Barto Flats area. High winds accompanying the thunderstorm blew down trees and caused some damage to buildings i the Fresno area; demolished a lumber shed at Pinedale carried away 100 feet of a chicken house near Kingsburg lifted the corrugated metal roof from a school bus she and scattered lumber piles at a lumber yard in Auberry Wind blown waves damaged or sank many boats on Millerto and Shaver Lakes. At Campo, San Diego County, a heav wind and rain squall, with speed estimated at 65 m.p.h. demolished a 250-foot chicken house, valued at $5,00 killing 1200 chickens valued at $1,800, tore off limb of large oak trees, and damaged roofs of other build ings in the vicinity. The Campo weather observer re ported 1.18 inches of rain in about a half hour. Heav hail caused damage in scattered localities. Hailstone up to one inch in diameter fell at Angwin and Calistog in the Napa Valley, and a pilot flying in the vicinit of Barstow encountered hailstones as large as gol balls.

MONTHLY EXTREMES

Highest temperature 125° on the 12th+ at Cow Creek.

Lowest Temperature 18° on the 1st at White Mountain 2.

Greatest Total Precipitation 3.23 inches at Dunsmuir.

Least Total Precipitation 0.00 at 238 stations.

Greatest One-day Precipitation 2.24 inches on the 30th at Morongo Valley.

Greatest Total Snowfall 2.5 inches at White Mountain 2.

(d) SANDY LOAM -- UNDER GRASS. DATA FROM THERMISTORS WITH COLMAN SOIL MOISTURE INSTRUMENT.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CALIFORNIA

AUGUST 1958

Volume LXII No. 8

ASHEVILLE: 1958

August 1958 was one of the warmest months of record in California. Except for the immediate coastal area most of the State experienced record or near record August mean temperatures. Both the mean and mean maximum (100.2°) temperatures at Red Bluff were the highest for August since records began in 1877. At Sacramento it was not only the warmest August of record but came a close second to the all-time monthly high mean temperature of 79.5° set in July 1931. Well above the average number of thunderstorms occurred during the month bringing precipitation much above normal in most parts of the State. With four thunderstorms it was the thunderiest August of record at Blue Canyon.

STORM DATA: On the 5th an isolated thunderstorm and flashflood piled up eight inches of water on Highway 66 near Yermo and covered it with rocks and mud west of Barstow. At Daggett 1 ENE about 5:30 p.m. 0.35 inch of rain fell in less than 10 minutes. Lightning started several fires in timber near Big Bear Lake.

Another thunderstorm in the same area the afternoon of the 7th washed out Highway 66 two miles east of Daggett where 2.08 inches fell in less than four hours. Trains were delayed between Barstow and Newberry when flash floods covered the tracks.

Also on the 7th a severe thunderstorm at Bridgeport, accompanied by strong to gale force winds, capsized several small boats on Bridgeport Lake drowning one person and causing considerable damage to lakeside facilities.

Widespread thunderstorms occurred in the western portions of Los Angeles, San Bernardino, and Riverside Counties, and in Orange County the 13th - 15th. Early on the 13th lightning struck transformers and power lines in Arcadia, Glendale, Hawthorne, Beverly Hills, Manhattan Beach, West Los Angeles, and Elsinore, and started several small brush fires in Riverside and Los Angeles Counties. On the 14th a forest ranger was killed and a companion seriously injured by lightning at Green Valley Lake near Lake Arrowhead. Lightning started brush fires near Cajon Pass and southeast of Banning. The Camp Angelus-Forest Home road was closed by mud slide. Hail damaged apple orchards a Oak Glen. Another thunderstorm and resultin flash flood closed Highway 66 between Barstc and Daggett for four hours on the 14th. C the 15th lightning struck a light plane cruis ing near Santa Ana, causing it to crash ar killing two occupants. Lightning struck tv homes in Arcadia, set a house and garage c fire in Downey, and struck many trees, powe lines, poles, and transformers in the Downey Arcadia, and San Fernando Valley areas. Lc cally heavy rains caused a rash of traffi accidents resulting in three deaths and scor of injuries.

At Bridgeport lightning caused some dama to property and killed some livestock on tl 14th.

On the 16th lightning killed a man fishi from a boat on Lake Isabella, Kern County

On the 17th lightning strikes caused mo than 40 fires in the Sequoia National Fores

On the 18th thunderstorms with heavy ra caused a landslide on Highway 40 near Trucke killing one man and injuring another. highway worker was also killed when his tru overturned while clearing the slide. Ha fell to a depth of four inches near the su mit of Echo Pass, and a rockslide partial blocked the highway.

In Siskiyou County lightning strikes the 19th caused 63 fires in widely scatter areas and burned out about 100 transform fuses in the Yreka-Grenada area.

On the 26th thunderstorms with lightni and locally intense rains again hit t Barstow area washing out portions of Highv 66 between Barstow and Yermo. Highway 4 west of Barstow was flooded, and power w disrupted for 1/2 hour at Twentynine Pal A few small fires were started by lightni near Idyllwild.

MONTHLY EXTREMES

Highest Temperature 122° on the 12th+ at Cow Creek.

Lowest Temperature 32° at White Mountain 2 on the 19th, White Mountain 1 on the 24th, and Boca on the 30th.

Greatest Total Precipitation 4.30 inches at White Mountain 2.

Least Total Precipitation 0.00 at 145 stations.

Greatest One-day Precipitation 2.06 inches on the 7th at Daggett CAA Airport.

Greatest Total Snowfall 1.6 inches at White Mountain 2.

See reference notes following Station Index.

† 8:00 A.M.

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

SEPTEMBER 1958
Volume LXII No. 9

ASHEVILLE: 1958

Continuing a trend of warmer temperatures, September 1958 ranks among the warmest Septembers of record in California, but unlike August, the greatest anomalies were in coastal areas. In the San Francisco Bay region it was the warmest month of record at all reporting stations, and at most other stations along the coast, records or near records were established for either the warmest September, or in many instances, the warmest month of record. At Eureka the maximum (85°) temperature on the 6th equalled the previous highest temperature of record. At Sacramento the average temperature ranked among the warmest 10 percent of all Septembers of record, and the 63 days with maximum temperatures 90° or above during July, August, and September was the greatest number for any three-month period during 82 years of record. In the opposite category, the maximum (72°) temperature on the 23d was the lowest maximum ever recorded in September at Bakersfield.

A few thunderstorms occurring early in the month, mainly in central and southern California, caused record or near record September totals of rainfall for some San Joaquin Valley and southern coastal stations. At Fresno, the September rainfall was the greatest since 1918, and the 9th greatest of record. At Santa Maria, it was the wettest September since 1916. The first snow of the season fell in the high Sierra on the 23d.

STORM DATA

Widespread thunderstorm activity occurred over central and southern California on the 5th - 7th, with storms most severe in the southern San Joaquin Valley, northern Santa Barbara County, San Bernardino Mountains, and the Mojave Desert. Lightning strikes caused many power failures, and scores of grass, brush, and timber fires. The major fires were near Hornitos, Mariposa County (1000 acres), Pastoria Canyon, southeast of Bakersfield (500 acres), near Lebec, Kern County (400 acres), and Indian Creek Canyon, east of Hemet (750 acres). Lightning struck an oil storage tank near Mc Kittrick, burning 5000 gallons before being controlled, and caused other small fires in oil fields in the vicinities of Taft, Paloma, Cuyama, and Santa Paula. A lightning-started fire burned a house in Fresno. Hail up to marble-size fell in parts of Los Angeles, San Bernardino, and Riverside Counties. Heavy rains accompanied the thunderstorms with flash floods in parts of the Mojave Desert and in the Coast Range between Santa Maria and Maricopa. Flash floods blocked Highways 395 and 466 with mud and silt near Barstow. The Santa Fe Railroad bed was washed out seven miles east of Boron. Approaches to a new freeway in Barstow were washed out, and a $50,000 repaving project destroyed. Flash floods inundated Highway 6 between Red Rock and Ricardo, and other desert highways were washed out or covered with mud and silt in that area. A portion of Highway 33 between Taft and Maricopa was washed out, and two underpasses were flooded in Delano. At Santa Maria 1.11 inches of rain fell during thunderstorms on the 7th, one of the heaviest September rainfalls of record there. Strong winds accompanying thunderstorms damaged 13 buildings at Camp Irwin (Barstow), and demolished an industrial building on the outskirts of town. Locally strong winds demolished several equipment sheds on ranches near Buttonwillow; several sheds were blown down on a turkey ranch near Kerman, killing 500 turkeys; at Hanford winds blew down trees, powerlines, and buildings. An automobile was crushed by a falling tree at Taft. Damage to the $50,000,000 raisin crop drying in fields in the San Joaquin Valley was only averted by dry weather following the storms. At Big Bear Lake, two children were killed and a third child injured when lightning struck a small shed where they had sought shelter.

Moderate to locally heavy rains, with locally strong winds occurring in the San Joaquin Valley on the 22d - 23d damaged rice, alfalfa seed crops, and drying raisins. Streets were flooded in Bakersfield and flash floods caused considerable damage to county roads in the Taft - Mc Kittrick areas. Strong winds blew down two large trees in Fresno.

Northerly winds, with speeds estimated 40 to 50 m.p.h., along a narrow path near the Berkeley, California hills on the morning of the 26th, blew down powerlines and trees, and caused some damage to sign boards and other light structures. A woman was injured when struck by a falling tree.

M. P. Bergerson
Acting State Climatologist
U. S. Weather Bureau
San Francisco, California

MONTHLY EXTREMES

Highest Temperature 121° on the 2d at Cow Creek.

Lowest Temperature 4° on the 24th at White Mountain 2.

Greatest Total Precipitation 3.90 inches at Pattiway.

Least Total Precipitation 0.00 at 19 stations.

Greatest One-day Precipitation 2.35 inches on the 23d at Huntington Lake.

Greatest Total Snowfall 3.5 inches at White Mountain 2.

Deepest Snow on Ground 3 inches on the 24th at White Mountain 2.

PREPARATION AND PUBLICATION OF THIS BULLETIN

Much of the data presented in this publication comes from observations taken by volunteer cooperative observers. These observations are mailed after the close of the month to a Weather Records Processing Center, where they are checked for accuracy and completeness and placed on punch cards. These cards are used to prepare copy for the various tables. Printing and mailing is done at the National Weather Records Center at Asheville, North Carolina.

The various steps all take time. Records for any state cannot be checked by machine until nearly all of them for that state have been received. Printing cannot be done until all the tables and the text for an issue are completed and assembled.

Constant effort is made to speed up publication and still maintain high quality of the data. A realistic deadline for mailing the printed Climatological Data has been set as the 15th of the second following month (45 days after the end of the month for which data are published). If any recipient's copy is unduly delayed, the Director, National Weather Records Center, Asheville, North Carolina should be advised.

See Reference Notes Following Station Index

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

OCTOBER 1958

Volume LXII No. 10

ASHEVILLE: 1958

October 1958 was another month of record or near record high temperatures over the State, except along the immediate coast north of Santa Maria. The greatest anomalies were in Southern California, where it was the warmest October of record at most stations. At Burbank a new record number of days with temperatures 90° or over was established, with temperatures averaging 3.5° higher than those of the previous warmest October. At Los Angeles Airport it was 6.3° warmer than the previous record, and maximum temperatures of 103° on the 3d and 16th were the highest ever recorded in October. The month was the warmest since records began in 1872 at San Diego, where the maximum of 98° on the 17th was the highest October temperature of record. It was the warmest October since 1933 at Bakersfield and Fresno, and at Sacramento, where 99 percent of possible sunshine set a new record, it was the warmest in 82 years of record. Other near records established were; Blue Canyon, 3d warmest; Red Bluff, 4th warmest; Mt. Shasta, 5th warmest of record. At San Francisco Airport, it was the warmest October since records began in 1928.

STORM DATA

Strong winds accompanying moderate to heavy rain occurred in Del Norte County on the 19th, with light damage, mainly to trees, reported at Elk Valley and Gasquet Ranger Station.

Strong winds in the foothills of Ventura and Los Angeles Counties on the 21st, with gusts reported reaching 50 m.p.h., fanned two fast-moving brush fires, which burned over a total of about 16,000 acres. One fire was in Ventura County, between Moorpark and Fillmore and the other about 30 miles north of Los Angeles. A weekend cabin was destroyed, and 16 persons were evacuated from a rest home in the fire area.

A well developed waterspout was observed offshore from Point Loma, San Diego County on the morning of the 24th, lasting for about eight minutes and moving in a north-northeasterly direction before dissipating over the sea. On the same morning, the aircraft carrier USS THETIS BAY observed seven separate waterspouts over the ocean in that vicinity.

Widespread thunderstorms with locally heavy rain, and scattered hail occurred in Southern California on the 24th - 25th. Heaviest damage occurred over mountain and desert regions, but several roads were flooded from heavy rains in the Torrance and Seal Beach areas. A washout occurred on the Solamint Canyon road in the San Gabriel Mountains, and there were a few mud slides near Camp Angelus. At Barstow, water ran curb high in downtown streets, damaging merchandise in the basements of some stores, and water entered several homes in residential areas. Near the Arizona border, hailstones up to 1/2 inch diameter fell at Parker Reservoir, and heavy rain caused several rock slides along the highway.

Strong Santa Ana winds blowing through mountain passes of Los Angeles, San Bernardino, and Riverside Counties on the 29th - 30th, tore branches from trees, and blew down a few powerlines and television antennas in foothill communities. Winds fanned a 300 acre brush fire west of Etiwanda, and a smaller fire near Azusa. Gusts reaching 69 m.p.h. were reported on the 29th at Fontana.

M.P. Bergerson
Acting State Climatologist
U. S. Weather Bureau
San Francisco, California

MONTHLY EXTREMES

Highest Temperature 111° on the 16th at Long Beach.

Lowest Temperature 6° on the 30th at Boca.

Greatest Total Precipitation 4.26 inches at Smith River 3 WNW.

Least Total Precipitation 0.00 at 86 stations.

Greatest One-day Precipitation 2.83 inches on the 31st at Smith River 3 WNW.

Greatest Total Snowfall 5.0 inches at White Mountain 2.

Deepest Snow on Ground 4 inches on the 25th at White Mountain 2.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

NOVEMBER 1958
Volume LXII No. 11

ASHEVILLE: 1959

Northerly flow of cold air following a storm front moving southward across the State on the 14th, caused the only lapse in the otherwise consistently warm month. Generally below freezing temperatures occurred on the following three days, except in coastal areas and at a few favored inland stations where winds kept minimum temperatures above freezing. The minimum (27°) temperature at Fresno on the 16th was the lowest ever recorded so early in the season, and equalled the lowest November temperature of record. At Santa Maria the minimum (25°) temperature on the 17th was a new record low for November.

STORM DATA

A waterspout was observed by the pilot of a Navy aircraft on the 10th at 10:34 P.s.t., in an area 5 - 10 miles northwest of Point Loma.

Strong winds, light rain, hail, blizzards, and freezing temperatures occurred on the 14th - 16th accompanying and following a cold front which moved southward over the State on the 14th. Strong winds in the Monterey Bay area drove a drifting Navy LCM ashore -- two crewmen were rescued; several small craft were torn from moorings and washed ashore; a $10,000 pleasure craft was badly damaged. Snow fell to low elevations in the Sierra closing two highways, and snow or hail whitened higher hills of the San Francisco Bay area and coastal ranges. Blizzard conditions prevailed in the mountains of southern California, closing two major highways temporarily. Damage to trees, powerlines, signboards, and TV antennas from strong, gusty winds was widespread in all southern areas. Dust and sandstorms in desert regions damaged numerous automobiles. Strong winds in harbor and coastal waters of southern California damaged many small boats. A barge loaded with concrete pipe capsized off Laguna Beach; a 70-foot schooner capsized in Catalina channels, with three of the crew presumably lost; two fishermen swam ashore at Portuguese Bend from a capsized fishing boat; three men were rescued from a capsized boat off Cabrillo Beach, with a fourth man presumably lost; five persons were rescued from a wrecked cabin cruiser at Point Loma; a $50,000 fishing boat broke up in the surf while attempting to enter King's Harbor at Laguna Beach, with the crew rescued by beach lifeguards. Locally violent, gusty, winds broke plate glass windows at a North Hollywood market, and unroofed a nearby storage building; demolished an automobile paint and body shop at National City; destroyed a film producer's tent city near Indio; and demolished a newstand at Montebello. Damage to crops from freezing temperature was light in northern California, but heavier in southern areas where more susceptible crops were in progress. Hail caused considerable damage to outdoor flower crops in the Oceanside -- Carlsbad areas.

M.P. Bergerson
Acting State Climatologist
U.S. Weather Bureau
San Francisco, California

MONTHLY EXTREMES

Highest Temperature 93° on the 4th at Indio U.S. Date Garden, on the 6th at San Bernardino County Hospital and Sunland.

Lowest Temperature -28° on the 17th at White Mountain 2.

Greatest Total Precipitation 12.54 inches at Gasquet Ranger Station.

Least Total Precipitation 0.00 at 17 stations.

Greatest One-day Precipitation 2.41 inches on the 13th at Klamath.

Greatest Total Snowfall 14.0 inches at Squaw Valley Lodge.

Deepest Snow on Ground 11 inches on the 16th at Giant Forest.

† 8:00 A.M.

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

DECEMBER 1958
Volume LXII No. 12

ASHEVILLE: 1959

This was one of the warmest Decembers of record in California. Except for the San Joaquin Valley, most of the State experienced record or near record December mean temperatures. The monthly mean temperature was the highest of record at San Diego, Burbank, Los Angeles Airport, Oakland Airport, San Francisco, Sacramento, Blue Canyon, and Red Bluff; and was the highest since 1940 at Santa Maria. New record high temperatures for December were established at a number of stations: Burbank (92°), Bishop (78°), Fresno (76°), Oakland (74°), San Francisco (76°), Sacramento (72°), Blue Canyon (75°), and Red Bluff (81°). At Mount Shasta the maximum temperature (72°) on December 11, was the highest December temperature since 1915. Previous record December temperatures were equalled at Santa Maria, San Diego, and Los Angeles Airport. Record daily high temperatures were exceeded on 1 days during the month at Oakland Airport and Sacramento, on 9 days at Red Bluff, and on days at San Francisco.

STORM DATA

Santa Ana conditions resulted in gale force winds in many mountain passes and canyons of southern California on the 2d and 3d. Wind gusts reaching 60 m.p.h. were reported at Fontana, and a large brush fire starting in the Malibu area north of Los Angeles burned over 21,000 acres, and destroyed 25 buildings (including a $50,000 home). Eight men were hospitalized for burns received in fighting the raging fire.

With Santa Ana conditions prevailing again in the period 13th - 16th, another hugh brush fire in the area north of San Juan Capistrano burned over 60,000 acres of brush and grass lands and destroyed 18 summer homes.

Northerly winds, with strong gusts, blowing over desert areas and through mountain passes of southern California on the 29th - 30th, toppled loads from trucks, blew branches from trees, and pitted automobile windshields in a series of blinding duststorms. At Fontana, where wind gusts to 78 m.p.h. were reported, a woman was injured when a heavy sign fell on her car. Trees were uprooted and signs blown down in Orange County and merchandise was damaged in a patio store in Anaheim.

M. P. Bergerson
Acting State Climatologist
U.S. Weather Bureau
San Francisco, California

MONTHLY EXTREMES

Highest Temperature 99° on the 3d at Yorba Linda and on the 4th at Santa Paula.

Lowest Temperature -2° on the 28th at White Mountain 2.

Greatest Total Precipitation 9.17 at Gasquet Ranger Station.

Least Total Precipitation 0.00 at 128 stations.

Greatest One-day Precipitation 3.80 on the 27th at Round Mountain 1 NNE.

Greatest Total Snowfall 21.0 inches at Twin Lakes.

Deepest Snow on Ground 23 inches on the 29th at Soda Springs.

CORRECTED DATA

JANUARY 1908	SANTA CRUZ	Precipitation on 23d should be 70.
FEBRUARY 1909	SANTA CRUZ	Precipitation on 10th should be 2.00
NOVEMBER 1909	SANTA CRUZ	Precipitation on 25th should be .02.
FEBRUARY 1915	SANTA CRUZ	Precipitation monthly total should be 10.23.
FEBRUARY 1919	SANTA CRUZ	Precipitation on 1st should be .10.
DECEMBER 1919	SANTA CRUZ	Precipitation on 3d should be .15.
JANUARY 1958	SQUAW VALLEY LODGE	Min temperature on 27th should be 3, mean min 15.5, mean 27 1, and total degree days 1165.
FEBRUARY 1958	REDDING FIRE STA 2	Min temperature on 21st should be 52; max and min on 22d 64 and 50, respectively. Mean max should be 58.1, mean min 45.7, mean 51.9, departure +2.6, and total degree days 356 Precipitation on 20th should be .02, 21st .04, 22d .09, monthly total 17.97, departure +11.98, and days with 10 or more 17
	SANTA MARIA	Min temperature on 26th should be 38, mean min 42.5, mean 54.3, departure +2.7, lowest 37 on 27th, and total degree days 290
MARCH 1958	LIVE OAK CANYON FC 230 C	Precipitation on 1st should be .63 and monthly total 6 90.
	UPPER LAKE RS	Min temperature on 12th should be 27, highest max 68 on 25th, and lowest min 23 on 7th.
APRIL 1958	REDDING FIRE STA 2	Add max and min temperatures on 30th, 81 and 55, respectively. Mean max should be 72.0, mean min 48.0, mean 60.0, departure +0 2, and total degree days 164.
MAY 1958	REDDING FIRE STA 2	See Delayed Data for corrected daily temperatures. Mean max should be 83 6 and mean min 56 8. Precipitation on 22d should be on 23d
JUNE 1958	LONG BEACH	Max temperatures on 20th should be 77; 23d, 79; 24th, 83; 29th, 78, mean max, 77.0; mean, 68 2; and departure +2 2
	REDDING FIRE STA 2	Max temperatures on 1st should be 76, 29th 92, mean max 87 1, mean 74 3, and departure -0.7
JULY 1958	DELAYED STORM DATA PAGE 214	Insert the following under the July 28 - 29 storm: "A flash flood at Barstow on the 29th destroyed one trailer home and damaged 66 others. Hail fell in some parts of the city causing an estimated $10,000 window damage".
AUGUST 1958	MANDEVILLE ISLAND	Evaporation monthly total should be 10.46.
	SUSANVILLE AP	Max temperature on 31st should be 92 and days with 90° or more 17
SEPTEMBER 1958	CAMP PARDEE	Evaporation on 23d should be .16 and monthly total 7 97.
	LOS BANOS	Max temperature on 22d should be 88, mean max 93.3, mean 74 6, and departure +1.8.
	TURNTABLE CREEK	Evaporation accumulated amount on 2d should be 75 and monthly total 10.06
OCTOBER 1958	HAMILTON AFB	Precipitation on 19th should be .04, monthly total .06, departure -1.41, and greatest day 04 on 19th.
	LOS BANOS	Max temperature on 15th should be 86, mean max 85.5, mean 67.9, and departure +3.4.
	SMITH RIVER 3 WNW	Precipitation on 31st should be accumulated amount (*) and monthly total accumulation (*).
NOVEMBER 1958	MITCHELL CAVERNS	Delete min temperature on 16th. Mean min should be 47 4M, mean 55.2M, lowest 17 on 17th, and total degree days 277.
	PORT CHICAGO NAVAL DEPOT	See Delayed Data for corrected daily temperatures Mean min should be 37.3, mean 52.6, lowest 28 on 31st, days with 32° or below 8, and total degree days 362.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Additional information regarding the climate of California may be obtained by writing to the State Climatologist at Weather Bureau Office, 557 Federal Office Building, 50 Fulton St., San Francisco 2, California, or to any Weather Bureau Office near you.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in°F., precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 4.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921-1950, adjusted to represent observations taken at the present location. Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Climatological divisions, outlined on the maps in this bulletin became effective with data for January 1941.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- No record.

+ Also earlier date (dates) or months.

* Amount included in following measurement.

V Includes total for previous months. V in annual column means total is for a two-year period.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

B Adjusted to full month.

C Data for recorder stations denoted by "C" in the Refer to Tables column of the Station Index are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Preoipitation Data".

E Amount is wholly or partially estimated.

G In the "Refer to Tables" column of the Station Index the letter "G" indicates that soil temperatures are published.

M One or more days' record missing; if average value is entered, less than 10 days' record is missing. See monthly Climatological Data for detailed daily record.

R Amounts from recording gage. These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".

S Storage precipitation station. Data will be published in the July or August or delayed data December issue of Climatological Data.

T Trace, an amount too small to measure.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 25 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

ALPINE 1 W	All equipment moved 0.4 mile NE.	December	3, 1958
